I often recommend a product called GB-3 from Endomet Labs. This product is a combination of ox bile, pancreatin, and Russian black radish. This article describes why this particular product, or something very similar, is very important.

A SUPERIOR DIGESTIVE AID

GB-3 is an excellent digestive aid because of its content of pancreatin and ox bile, primarily, which are digestive enzymes. Most people need this type of digestive support at all ages, but particularly those over the age of 50 or so and anyone who is ill or has lowered vitality.

However, GB-3 offers more than a standard digestive aid. The dehydrocholic acid in GB-3 also helps acidify the intestine, which is very important. The combination of the ingredients also stimulates bile production, which also enhances digestion.

REMOVES PARASITES AND OTHER PATHOGENS

Most people today have some degree of intestinal dysbiosis. This means the presence of infections, yeasts, parasites and other flora or micro-organisms in the intestines that are not ideal. GB-3 will help kill many of these.

This is a great advantage of this product, because it replaces a wide range of other products that doctors must use to clear candida albicans, parasites and other abnormal bowel organisms. This saves money, time and effort for the client. While GB-3 does not work 100% of the time in most cases its amazingly effective.
A SYMPATHETIC NERVOUS SYSTEM INHIBITOR

Another important aspect of GB-3 as it relates to nutritional balancing programs, is how it helps correct the balance of the autonomic nervous system.

Most people have exhausted their sympathetic or fight-or-flight nervous systems. Most have fallen into a parasympathetic state of slow oxidation. However, many are yet what we call sympathetic dominant. This means they retain the mental patterns such as fear and worry that pushed them into an exhaustion state. Therefore, they will benefit from any method that helps to relax the sympathetic nervous system.

GB-3 is what I call a parasympathetic supplement compared to other digestive aids such as Betaine HCl-pepsin.

The GB-3 ingredients of pancreatin, dehydrocholic acid, ox bile and russian black radish all inhibit the sympathetic nervous system helping you relax and rebuild the parasympathetic nervous system.

A CANCER PREVENTIVE

Based on national health statistics, about half of all Americans will be diagnosed with cancer at some time in their lives. According to medical studies, on average one has had cancer three to five years before it is diagnosed. If the cancer can be stopped at an extremely early, pre-clinical stage, it is far easier to heal.

Pancreatic enzymes such as pancreatin and also in ox bile can help destroy cancer cells. This was discovered by Dr. John Beard, author of *The Trophoblastic Theory of Cancer*.

Taking GB-3 regularly provides an inexpensive, low-potency way to help prevent some cancer from the body. GB-3 is not a “cancer cure” by any means however, it may be a helpful preventive.
AN ANTIDOTE FOR COPPER TOXICITY

Many people have excess copper in their tissues. Nutritional balancing uses many methods to correct this situation at the same time. One of the ways is to enhance the activity of the liver, where most copper is stored as the body tries to deal with it and remove it. GB-3 is helpful for this purpose as it enhances bile flow in the liver.

LIVER SUPPORT

With the proliferation of toxic chemicals and toxic metals in the environment, most everyone has a toxic liver to some degree. Slow oxidizers, in particular, develop sluggish liver activity due to weak adrenal and thyroid glandular activity.

GB-3 is an excellent liver support formula that helps the body eliminate many toxic metals and chemicals from the liver.

REACTIONS AND CAUTIONS WITH GB-3

Upon starting GB-3, some people report diarrhea, intestinal cramps or stomach upset. This occurs because pancreatin and ox bile digest the candida organisms, parasites, bacteria’s and debris in the intestines.

If this happens the solution is very simple. One needs to reduce the dosage at first, as low as 1/2 tablet per day, and then slowly increase the dosage. However many people starting out can take 1 tablet per meal without any diarrhea.
To order GB-3

$28.00 ea (90 tabs)

** ONLY $4.95 SHIPPING! **
(3 bottle maximum)

-----------------------------------------------------------

Refunds:
If for some reason you are not happy with your purchase you can return any unbroken sealed bottle(s) within 30 days of purchase.

No Refunds will be accepted for opened bottles!
Shipping cost for all refunds are paid by the customer.
